Message from the Guest Editors

The journal *Medicina* is launching a Special Issue titled “Thoracic Surgery for Lung, Pleural and Esophageal Malignancies: Current Practice and Future Directions” with the goal of bringing together and presenting current and future developments in thoracic surgery and thoracic oncology.

We are pleased to invite you and your co-workers to submit your articles on this topic. We encourage the submission of original, review, or short report articles dealing with current issues of thoracic surgical practice including outcomes and efficacy of VATS and RATS, as well as traditional operative approaches for lung, esophageal, and pleural cancers, technical challenges, novel video-thoroscopic techniques, as well as future improvements in equipment, energy devices, instrumentation, and robotic technology. In addition, we encourage the reporting of issues and developments in oncological surgical management. Finally, it would be of interest to receive reports regarding the introduction, integration, and establishment of thoracoscopic surgery within the current clinical practice.
